LLF = LLD x LDD x BF =	
Footcandles or Lux: Ave Max	Min AVE/MIN MAX/MIN
Room Dimensions: L W H (If Not Rectangular Send DXF or CAD File)	
(Should .dwg or .dxf files come with un-needed layers, or blocks and unbound x-references added costs to manipulate may apply)	
Reflectance: Ceiling Walls Floor	
Textures & color if known; Ceiling	Walls Floor
Are Locations Provided? Yes No	Are Locations Set? Yes No
On the lines below please describe any restrictions, code or other requirements for this project.	

*** Make sure all required information is filled in completely so as to not delay your projects completion. Be sure to attach all drawing files applicable. Cross sections of interior spaces are helpful and required for sports arenas and other complicated spaces. Hard copies of drawings require digitizing and will have longer lead times and costs due to time and travel.

DISCLAIMER: IPA-D assumes no liability for the predictions made for their photometric analysis. These predictions rely on information such as reflectances supplied by others as well as components that carry some degree of variance. We can only assume that manufacturers IES formatted photometry is up to date and correct. AGI32 software is IPA-D.com's primary software of choice and is produced by Lighting Analysts Inc. out of Littleton CO. All questions or concerns about the software should be directed to Lighting Analysts. Questions regarding the photometric files should be directed to the manufacturer of the product these files represent.
